<u>Coursework Report</u>

My coursework uses SQL, PHP, CSS and HTML in order to do the given tasks. All questions are on the index page in their own forms. I had some errors when validating such as an error occurs saying stray end tag head and start tag body seen but an element of the same type was already open on all forms. I added additional features such as logo in the head, navigation button which takes the user to go back to the index and changed the design of the forms and submit button. Also, for Q3 I added an if statement for grade so that only s (seniors) and j (juniors) grades can be added, other inputs will give an error.
